

Digital Print, Inc.  
We drive variable printing

## Code Reading System (C.R.S.)

Digital Print's **Code Reading System (C.R.S.)** gives real time Read / No Read feedback to the Press operator with a Red/Green visual light. The indication lights can be mounted in the operator's line-of-sight for convenient reassurance of readability of the barcodes. The system can read all types of barcodes including all linear, 2D, GS1 and HarvestMark.

Integration, installation & training are fast and easy. The C.R.S. code reading system can be added to any DPi variable printing system

### Read / No Read Camera systems:

- Read speeds up to 500 codes per minute
- Super easy auto set up mode that only requires moving the camera over the code printing area
- Downloadable log files that can be sent to your customer (.txt file type)
- Simple "green" for readable & "red" for not readable lights for fast on the fly production decisions
- Add up to 8 lanes of scanning across the web
- 1 year warranty
