

DPI

Next Generation Corrugated Printing

Hi-Speed Digital Inkjet Technology

Next Generation Corrugated Printing

Corrugated Digital Inkjet Solutions

Who we are:

In business since 1986 Digital Print Inc. (DPI) builds stand-alone machines and retrofits digital inkjet printing systems onto webs, sheet-fed and converting machines. With over 300 systems running in the US market today DPI is an industry leader in digital inkjet.

What we do:

Design & build digital inkjet controllers & systems for various printing / converting applications.

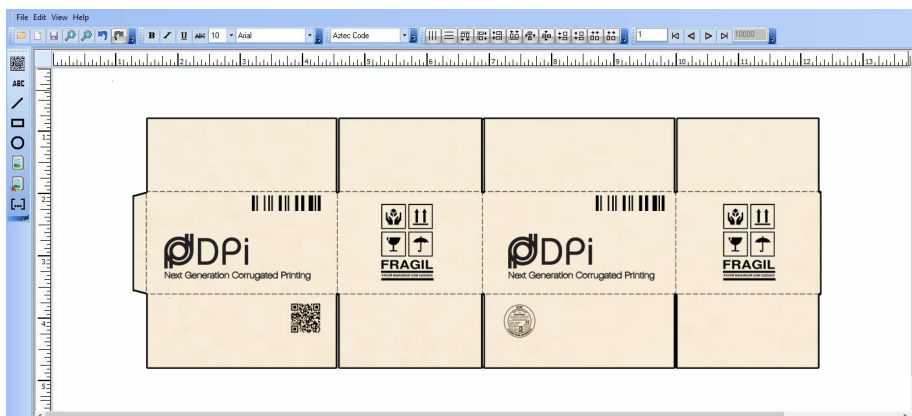

Our goal:

In 2018 DPI entered the corrugated market to build economically smart inkjet solutions for industrial box makers that compete with flexo post-print, but gives all of the advantages of digital printing.

What we can do for corrugated:

Printing mostly on uncoated kraft & mottled white allows our systems to use vibrantly formulated water-based or UV ink sets to maximize the unique substrates.

DPI's Digital Inkjet Solutions can be retrofitted to the wet-end web or constructed-end of a corrugator, Asitrade, RSC folder/gluers, rotary or flatbed D/C and many others with multiple digital printbars. This would allow coverage from 4" to 130" across with 1, 2 or 4 colors at speeds up to 1,200 fpm.

Call us today to find out the possibilities for your plant!
